```
Question 1
Correct
Marked out of 5.00
```

Create a class called "Circle" with a radius attribute. You can access and modify this attribute using getter and setter methods. Calculate the area and circumference of the circle.

Area of Circle = πr^2

Circumference = $2\pi r$

Input:

2

Output:

Area = 12.57

Circumference = 12.57

For example:

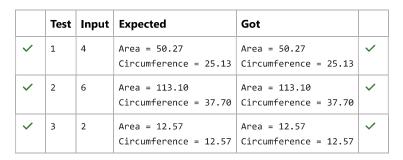

Test	Input	Result	
1	4	Area = 50.27	
		Circumference = 25.13	

Answer: (penalty regime: 0 %)

Reset answer

```
1 | import java.util.*;
 2 import java.lang.Math;
 3
   class Circle
4 ▼ {
 5
        private double radius;
        public Circle(double radius){
 6 .
            // set the instance variable radius
 7
8
           setRadius(radius);
9
10
        public void setRadius(double radius){
11
12
            // set the radius
13
           this.radius=radius;
14
15
16
        public double getRadius()
            // return the radius
17
18
            return radius;
19
        public double calculateArea() { // complete the below statement
20
21
           return Math.PI*radius*radius;
22
23
24 .
        public double calculateCircumference()
25
            // complete the statement
26
           return 2*Math.PI*radius;
27
        }
28
29
    class prog{
30
        public static void main(String[] args) {
31
            int r;
32
            Scanner sc= new Scanner(System.in);
33
            r=sc.nextInt();
34
            Circle c= new Circle(r);
35
            System.out.println("Area = "+String.format("%.2f", c.calculateArea()));
36
            // invoke the calculatecircumference method
37
            System.out.println("Circumference = " + String.format("%.2f",c.calculateCircumference()
38
39
```

```
Question 2
Correct
Marked out of 5.00
```

Create a Class Mobile with the attributes listed below,

```
private String manufacturer;
private String operating_system;
public String color;
private int cost;
```

Define a Parameterized constructor to initialize the above instance variables.

Define getter and setter methods for the attributes above.

```
for example: setter method for manufacturer is
void setManufacturer(String manufacturer){
this.manufacturer= manufacturer;
```

String getManufacturer(){

return manufacturer;}

Display the object details by overriding the toString() method.

For example:

Test	Result		
1	<pre>manufacturer = Redmi operating_system = Andriod color = Blue cost = 34000</pre>		

Answer: (penalty regime: 0 %)

```
1 v import java.util.*;
 2 √ class Mobile {
 3
        private String manufacturer;
 4
        private String operating_system;
 5
        public String color;
 6
        private int cost;
 7
        public Mobile(String manufacturer, String operating_system, String color, int cost) {
8
            this.manufacturer = manufacturer;
 9
            this.operating_system = operating_system;
10
            this.color = color;
11
            this.cost = cost;
12
        public void setManufacturer(String manufacturer) {
13
14
            this.manufacturer = manufacturer;
15
16
        public String getManufacturer() {
17
            return manufacturer;
18
19
        public void setOperatingSystem(String operating_system) {
20
            this.operating_system = operating_system;
21
22 .
        public String getOperatingSystem() {
23
            return operating_system;
24
25 .
        public void setColor(String color) {
26
            this.color = color;
27
28
        public String getColor() {
29
            return color;
30
31
        public void setCost(int cost) {
32
            this.cost = cost:
```

```
33
34
        public int getCost() {
35
             return cost;
36
        public String toString() {
37 •
             return "manufacturer = " + manufacturer + "\n" +
38
                    "operating_system = " + operating_system + "\n" +
39
                    "color = " + color + "\n" +
"cost = " + cost;
40
41
42
        }
43
    }
    public class MobileTest {
44
        public static void main(String[] args) {
45
             Mobile mobile = new Mobile("Redmi", "Andriod", "Blue", 34000);
46
             System.out.println(mobile);
47
48
        }
   }
49
```

	Test	Expected	Got	
~	1	manufacturer = Redmi operating_system = Andriod color = Blue cost = 34000	<pre>manufacturer = Redmi operating_system = Andriod color = Blue cost = 34000</pre>	~

```
Question 3
Correct
Marked out of 5.00
```

Create a class Student with two private attributes, name and roll number. Create three objects by invoking different constructors available in the class Student.

Student()

Student(String name)

Student(String name, int rollno)

Input:

No input

Output:

No-arg constructor is invoked 1 arg constructor is invoked 2 arg constructor is invoked Name = null , Roll no = 0 Name = Rajalakshmi , Roll no = 0 Name = Lakshmi , Roll no = 101

For example:

Test	Result			
1	No-arg constructor is invoked			
	2 arg constructor is invoked			
	Name =Rajalakshmi , Roll no = 0			
	Name =null , Roll no = 0			

Answer: (penalty regime: 0 %)

```
1 → import java.util.*;
 2 v class Student {
 3
        private String name;
 4
        private int rollNumber;
 5
        public Student() {
            System.out.println("No-arg constructor is invoked");
 6
 7
            this.name = null;
 8
            this.rollNumber = 0;
9
10
        public Student(String name) {
            System.out.println("1 arg constructor is invoked");
11
12
            this.name = name;
13
            this.rollNumber = 0;
14
15
        public Student(String name, int rollNumber) {
16
            System.out.println("2 arg constructor is invoked");
17
            this.name = name;
18
            this.rollNumber = rollNumber;
19
        }
20
        public void displayDetails() {
            System.out.println("Name =" + name + " , Roll no = " + rollNumber);
21
22
23
24
    public class StudentTest {
        public static void main(String[] args) {
25
26
            Student student1 = new Student();
            Student student2 = new Student("Rajalakshmi");
27
            Student student3 = new Student("Lakshmi", 101);
28
29
            student1.displayDetails();
30
            student2.displayDetails();
31
            student3.displavDetails():
```

```
32 }
33 }
```

1	Test	Expected	Got	
✓ 1	1	No-arg constructor is invoked 1 arg constructor is invoked 2 arg constructor is invoked Name = null , Roll no = 0 Name = Rajalakshmi , Roll no = 0 Name = Lakshmi , Roll no = 101	No-arg constructor is invoked 1 arg constructor is invoked 2 arg constructor is invoked Name =null , Roll no = 0 Name =Rajalakshmi , Roll no = 0 Name =Lakshmi , Roll no = 101	~
